Solaris Grid Energy plc
Annual Report 2025

Powering the Nordic and Central European transition to renewable electricity.

Published 12 March 2026. This report covers the financial year from 1 January 2025 to 31 December 2025 and has been prepared for shareholders, lenders, employees and other stakeholders of Solaris Grid Energy plc.

Contents

1. Letter from the Chief Executive
2. Company overview
3. Financial review
4. Segment performance
5. Operations and major projects
6. Sustainability and safety
7. Risk management
8. People and governance
9. Outlook and shareholder information

This document is provided for information only. Forward-looking statements are based on current expectations and involve uncertainty.

1. Letter from the Chief Executive

Dear shareholders, 2025 was a year of delivery for Solaris Grid Energy. We commissioned the largest project in our history, grew revenue by double digits and reduced our injury rate to the lowest level since we began reporting it. I am grateful to our colleagues in four countries who made this possible.

Electricity markets remained volatile throughout the year. Wholesale prices swung sharply between spring and autumn, and several competitors reported earnings pressure as a result. Our disciplined hedging policy and a growing share of long-term power purchase agreements protected margins and allowed us to keep investing in new capacity.

Looking ahead, our strategy is unchanged: build and operate renewable generation at scale, connect it efficiently to the grid and sell clean power to industrial customers under multi-year contracts. We have set an ambition of 8 GW of installed capacity by 2030, supported by a development pipeline that already exceeds 11 GW at various stages of maturity.

I would also like to thank our Board for its support during a demanding year, and our lenders for the confidence shown in the new sustainability-linked credit facility signed in the autumn.

Ingrid Solberg, Chief Executive Officer

2. Company overview

Solaris Grid Energy plc was founded in 2009 and is headquartered in Aarhus, Denmark. The company develops, builds, owns and operates wind and solar power plants and sells the electricity it generates to utilities, industrial customers and on wholesale markets.

At 31 December 2025 the group employed 3,480 people across Denmark, Germany, Poland and Spain. The group operates 74 generation sites with a combined installed capacity of 5.2 GW. During the year the portfolio produced 14.6 TWh of electricity, enough to supply roughly 4.1 million average European households.

Technology	Installed capacity (GW)	Share of portfolio
Onshore wind	2.9	56%
Offshore wind	1.4	27%
Solar PV	0.9	17%
Total	5.2	100%

The group is organised into four business segments: Onshore Wind, Offshore Wind, Solar, and Trading and Services. Each segment has its own management team and reports to the Chief Executive and Chief Financial Officer, Marcus Heller.

3. Financial review

Group revenue for 2025 was EUR 1.84 billion, compared with EUR 1.62 billion in 2024. Growth was driven by the full-year contribution of projects commissioned in 2024 and the start of commercial operation at our newest offshore wind farm.

EUR million	2025	2024
Revenue	1,840	1,620
EBITDA	412	371
Net profit	138	117
Capital expenditure	640	705
Net debt	1,950	1,880

EBITDA rose to EUR 412 million and net profit to EUR 138 million. Capital expenditure was EUR 640 million, lower than in 2024 as the company completed its largest construction programme and moved into a lighter spending phase before the next wave of projects begins.

Net debt at year-end was EUR 1.95 billion, equal to 4.7 times EBITDA. The Board is proposing a dividend of EUR 0.46 per share for 2025, subject to approval at the Annual General Meeting. The company holds a BBB+ credit rating from Fitch Ratings with a stable outlook.

Cash flow from operating activities was EUR 389 million. Liquidity at year-end comprised EUR 215 million in cash and EUR 600 million in undrawn committed credit lines.

4. Segment performance

The table below shows revenue by segment. Onshore Wind remained the largest contributor, while Offshore Wind showed the strongest growth as Nordhavn entered service.

Segment	Revenue 2025 (EUR m)	Revenue 2024 (EUR m)
Onshore Wind	790	760
Offshore Wind	610	480
Solar	240	210
Trading and Services	200	170
Group	1,840	1,620

Onshore Wind. Availability averaged 97.4% across the fleet. Two repowering projects in Germany replaced older turbines with units that deliver 38% more energy from the same sites.

Offshore Wind. Output increased 27% on the previous year. The segment benefits from long-term contracts with fixed prices that insulate it from short-term market swings.

Solar. Three new solar parks in Spain added 210 MW during the year. Solar now represents 17% of installed capacity and is the focus of our fastest-growing development pipeline.

Trading and Services. The trading desk manages the group's hedging programme and sells flexibility services to grid operators. Revenue grew 18% as demand for balancing services increased.

5. Operations and major projects

The flagship achievement of 2025 was the commissioning of the Nordhavn Offshore Wind Farm in June 2025. Located 28 kilometres off the Danish coast, Nordhavn has a capacity of 640 MW and consists of 54 turbines. The project was completed within 2% of its original budget and reached full commercial operation two months ahead of schedule.

In Poland, the group completed the 180 MW Zielona Wind Park in the Pomerania region, supported by a ten-year power purchase agreement with a leading steel producer. In Spain, the Alcázar, Los Olmos and Valdeferro solar parks were connected to the grid between March and September.

Construction continues on the Baltic Dawn offshore project, where foundation installation is scheduled to start in spring 2027. Baltic Dawn is expected to add 900 MW of capacity and is the cornerstone of the 2030 growth plan.

Operational excellence programmes reduced unplanned downtime by 14% across onshore sites. Remote monitoring now covers every turbine in the portfolio, and predictive maintenance models have cut the number of emergency repair callouts by a fifth.

6. Sustainability and safety

Our generation avoided an estimated 6.1 million tonnes of carbon dioxide emissions in 2025 compared with the average European grid mix. We continue to report emissions in line with the Greenhouse Gas Protocol and have committed to science-based targets validated by an independent body.

Safety is our first priority. The lost-time injury frequency rate fell to 0.62 per million hours worked in 2025, from 0.81 in 2024. There were no fatalities in the year. Contractors working on our construction sites are included in these statistics.

Sustainability indicator	2025	2024
Avoided CO2 (million tonnes)	6.1	5.3
Lost-time injury rate	0.62	0.81
Share of waste recycled	91%	88%
Women in management roles	34%	31%

We work with local communities near every project. At Nordhavn, a community fund will distribute EUR 1.2 million over ten years to coastal towns. Biodiversity monitoring programmes, including bird and bat surveys, are carried out at all onshore sites.

7. Risk management

The Board oversees risk through the Audit and Risk Committee, which meets quarterly. Management maintains a group risk register that is reviewed twice a year and stress-tested against severe but plausible scenarios.

Wholesale price volatility is rated as the most significant risk. To mitigate it, the group had hedged 72% of expected 2026 output at year-end, up from 64% a year earlier. Hedging is carried out within limits approved by the Board.

Construction and supply chain risk. Turbine and cable shortages continue to affect the industry. The group has secured framework agreements with two turbine suppliers covering projects through 2028.

Regulatory risk. Changes in auction design or grid fees could alter returns. We engage constructively with policymakers and diversify across four national markets.

Cyber security. Operational technology networks are segregated from corporate systems and tested annually by external specialists. No incident with material impact occurred in 2025.

Interest rate risk. Approximately 81% of group borrowings carry fixed rates, limiting exposure to rate rises.

8. People and governance

The Board of Directors consists of nine members, of whom six are independent. The Chair is Henrik Lund, who has served since 2021. The Board met eight times in 2025, with an average attendance of 96%.

Country	Employees at 31 Dec 2025
Denmark	1,420
Germany	980
Poland	640
Spain	440
Total	3,480

Employee engagement, measured in the annual survey, reached 78 points out of 100, a rise of four points. Voluntary staff turnover was 7.2%. We invested an average of 31 training hours per employee, with a focus on high-voltage safety and digital skills.

The external auditor is Kessler and Brandt LLP, appointed in 2022. Audit fees for 2025 were EUR 1.4 million, of which EUR 0.2 million related to non-audit services. The Remuneration Committee has linked 30% of executive variable pay to safety and sustainability targets.

9. Outlook and shareholder information

For 2026 we expect EBITDA between EUR 440 million and EUR 470 million, supported by a full year of Nordhavn operations and the new solar parks. Capital expenditure is expected to rise to approximately EUR 780 million as Baltic Dawn construction ramps up.

Net debt to EBITDA is expected to remain below 5.0 times throughout 2026. We will continue to prioritise investment grade metrics while delivering a progressive dividend.

Financial calendar

Annual General Meeting: 22 April 2026, Aarhus
First quarter results: 6 May 2026
Half-year results: 12 August 2026
