Incident Report INC-2026-0392

Title: Payment API outage
Severity: SEV-1
Date: 19 August 2026
Owner: Platform Reliability Team

Timeline (UTC)

Time	Event
14:05	Payment API begins returning HTTP 502 errors
14:12	On-call engineer paged by monitoring alert
14:40	Root cause identified in the internal gateway
15:47	New certificate deployed; service fully restored

Impact

Approximately 12,400 payment transactions failed during the incident. Three enterprise customers raised support tickets. Total duration of the outage was 1 hour 42 minutes.

Root cause

An expired TLS certificate on the internal API gateway caused upstream services to reject connections. Certificate renewal was not covered by automated monitoring.

Corrective actions

1. Implement automated certificate expiry alerts at 30, 14 and 7 days - due 15 September 2026.
2. Add certificate renewal to the quarterly operations checklist - owner: Platform Reliability Team.
